Re: Notification of Ex Parte Presentation

Petition of the Association for Local Telecommunications Services
for a Declaratory Ruling Establishing Conditions Necessary to Promote
Deployment of Advanced Telecommunications Capability Under 706
of the Telecommunications Act of 1996
CC Docket No. 98-78

Petition of Bell Atlantic Corporation for Relief from Barriers to
Deployment of Advanced Telecommunications Services
CC Docket No. 98-11

Petition of Ameritech Corporation for Relief from Barriers to
Deployment of Advanced Telecommunications Services
CC Docket No. 98-32

Petition of U S West Corporation for Relief from Barriers to
Deployment of Advanced Telecommunications Services
CC Docket No. 98-26

Petition of the Alliance for Public Technology Requesting Issuance
of Notice of Inquiry and Notice of Proposed Rulemaking to Implement
Section 706 of the 1996 Telecommunications Act
RM No. 9244

Dear Ms. Salas:

Pursuant to Section 1.1206(b)(1) and (2) of the Commission's Rules, Intermedia
Communications Inc. ("Intermedia") provides notice of an oral *ex parte* presentation in the

KELLEY DRYE & WARREN LLP

Magalie R. Salas, Secretary

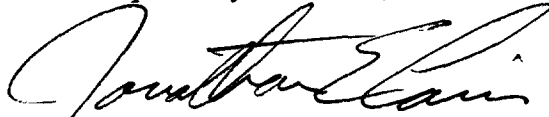

July 13, 1998

Page Two

above-captioned docketed proceedings on July 13, 1998. The presentation was made by David Ruberg, President of Intermedia, and Julia Strow and Don Davis, both Assistant Vice Presidents of Industry Policy for Intermedia. These Intermedia representatives were accompanied by Heather Gold, President of the Association for Local Telecommunications Services, and by the undersigned. The presentation was made to Kathryn Brown, Chief, Common Carrier Bureau and her Legal Counsel, Blaise A. Scinto. Intermedia discussed a variety of issues raised in the petitions filed in the above-captioned proceedings.

A copy of a handout used in the presentation is attached. Pursuant to Section 1.1206(b)(1) and (2) of the Commission's Rules, Intermedia hereby submits an original and two (2) copies of this *ex parte* notification for inclusion in the public record. Please direct any questions regarding this matter to the undersigned.

Respectfully submitted,

A handwritten signature in black ink, appearing to read "Jonathan E. Canis", written in a cursive style.

Jonathan E. Canis

Section 706 -- Ex Parte

Advanced Broadband Infrastructure

Deployment Needs in
A Competitive Environment

Advanced Broadband Infrastructure

Advanced Broadband Technology is more than xDSL.

- xDSL relies on relatively “old” loop technology.

Next generation loop architecture will require access to
customers’ electronics.

- Section 272 subsidiaries will not provide adequate competitive protections for data services.

Broadband is more than xDSL

Competitive industry has led in deployment of ATM and frame relay services and packet/cell facilities.

- These packet/cell based services require the same carrier to carrier interconnections as those required for switched services.

of Frame Relay UNI Connections

xDSL relies on relatively “old”
loop technology

Provisioned over basic copper pair.

Competitors must have access to a specific
pair from subscriber back through
end office.

Economics of competitive entry highly
dependent upon price of collocation and
unbundled loops.

Diagram 1

Traditional Loop Distribution Systems: Copper Between Customer Premises and Central Office

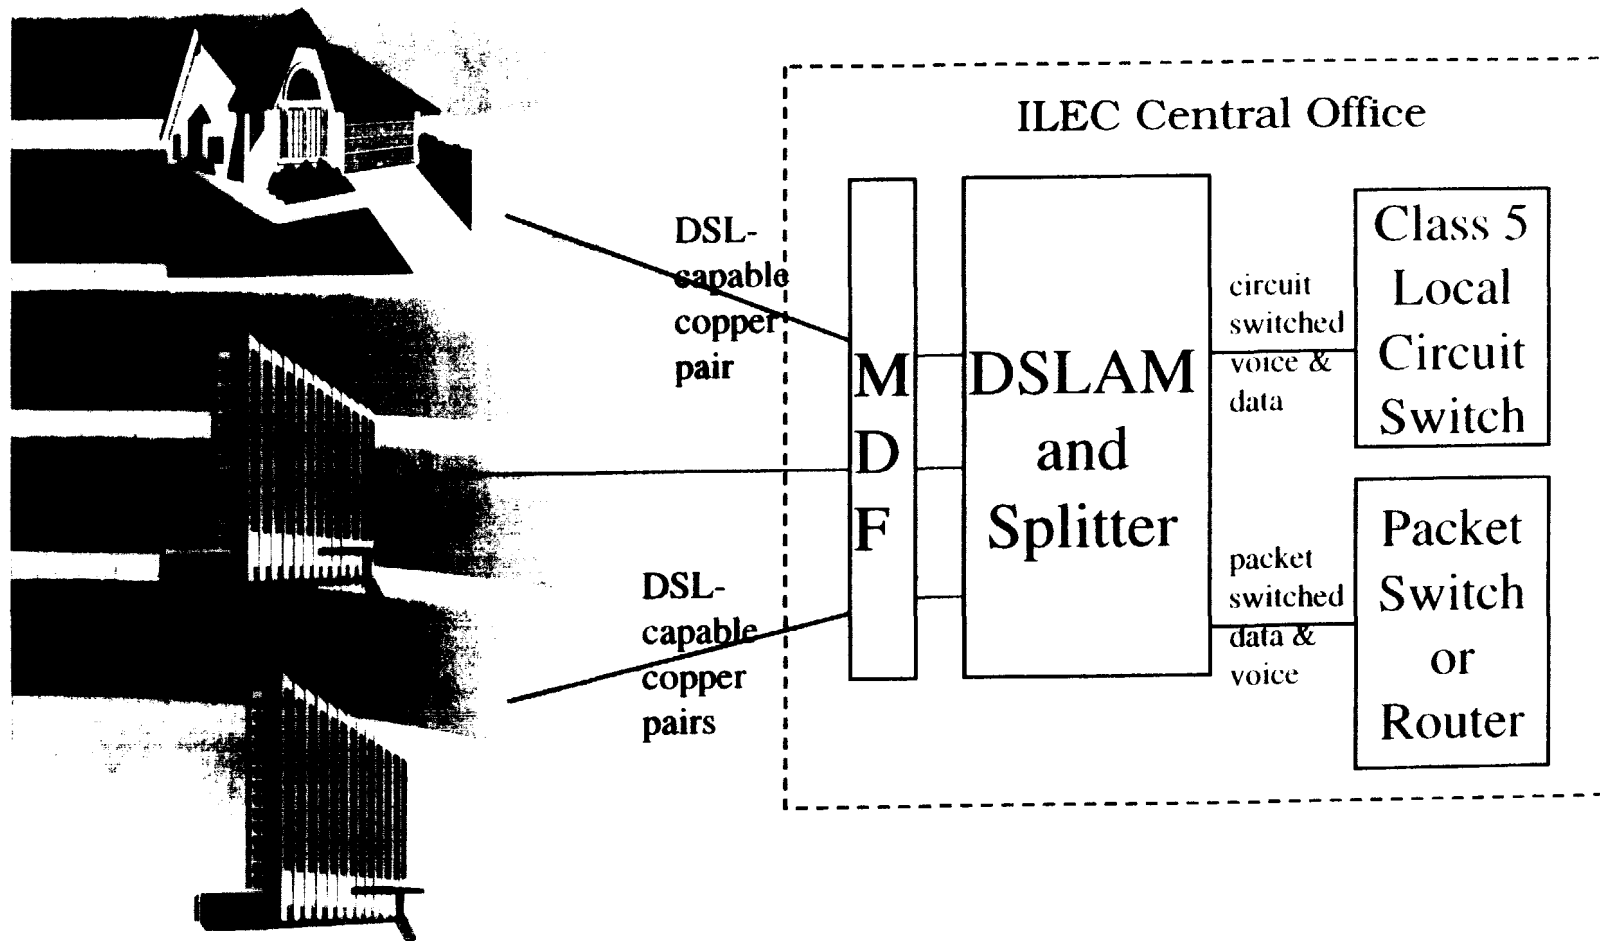

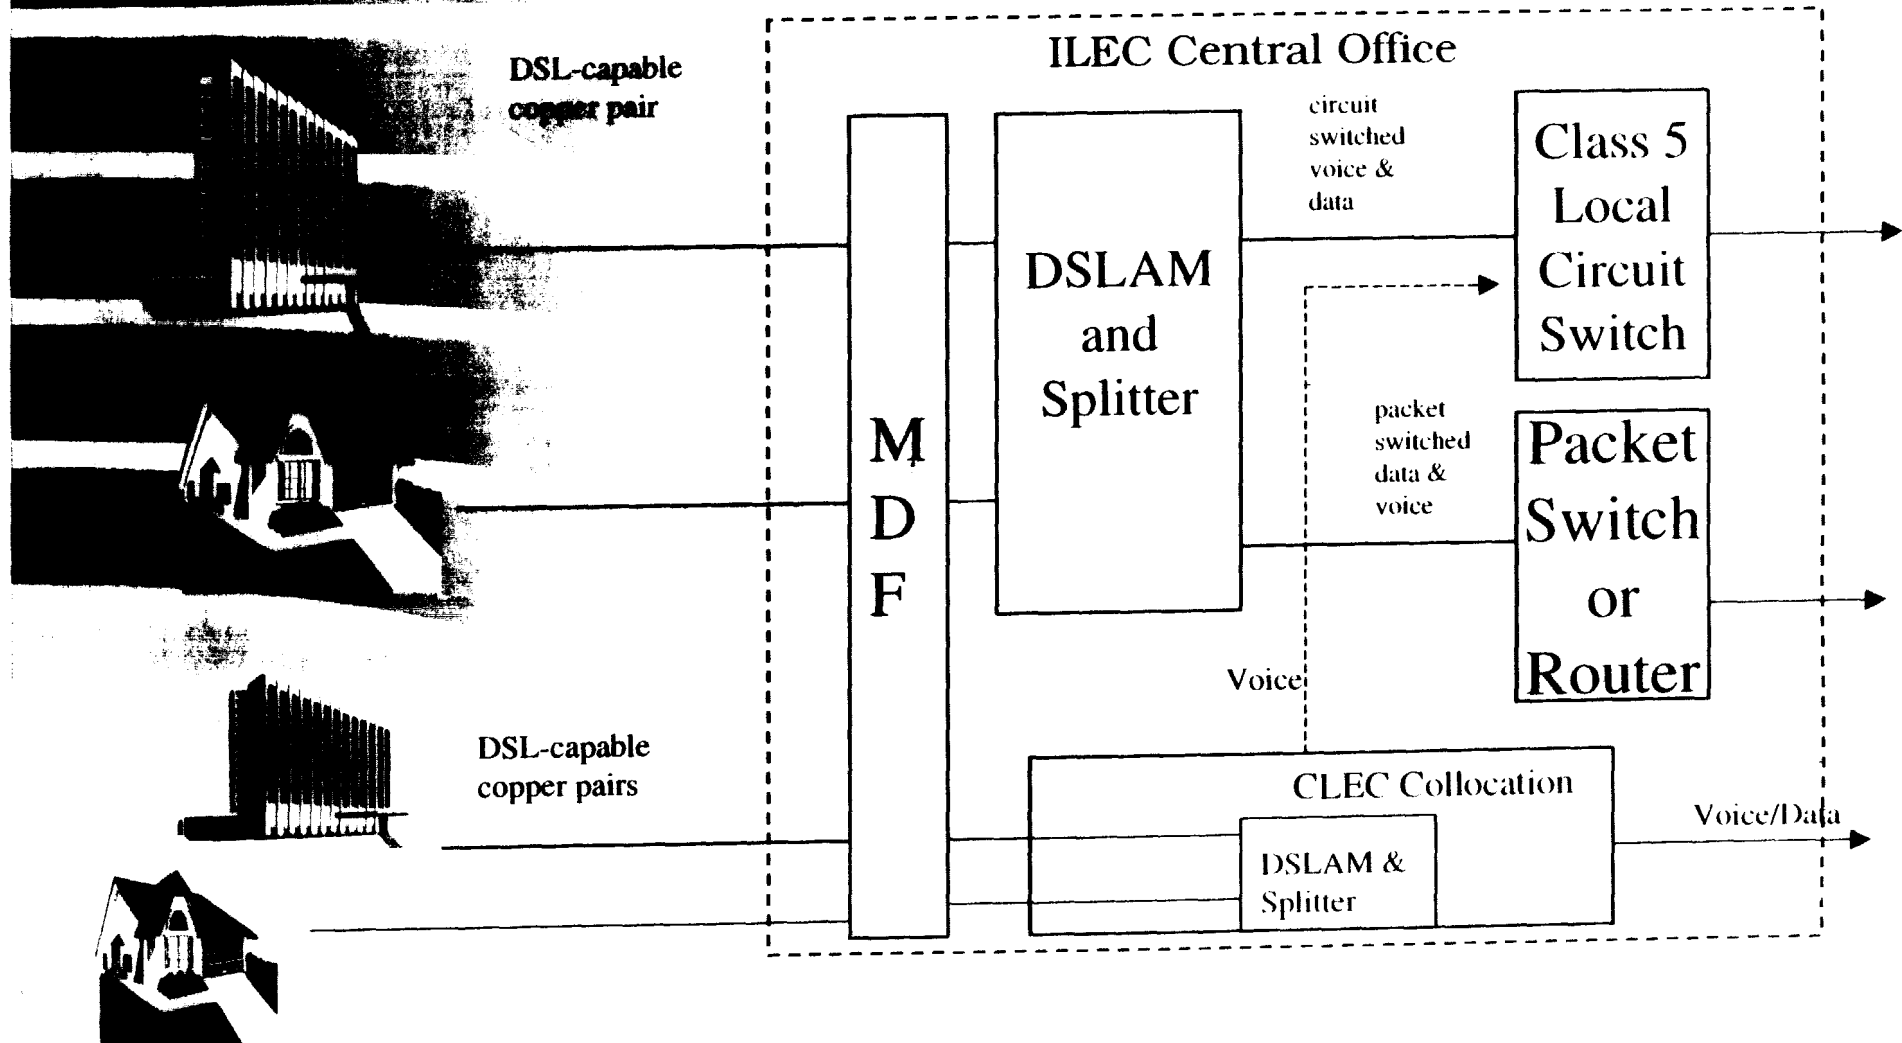

Diagram 2

Loop Distribution Systems with CLEC Collocation: Copper Between Customer Premises and Central Office

Next Generation of Loop Technology Will Require Competitor Access to Loop Electronics

Current loop architecture is being replaced by
combinations of fiber, copper and in some circumstances

combinations require electronics situated at the
remote terminals where the mixed media are joined.

Electronics will remove the need for certain
capabilities in the CO.

- Competitors will be thwarted in efforts to reach end users served under these loop technologies unless they also have access to the electronics.

$$> 18,000 \text{ ft}$$

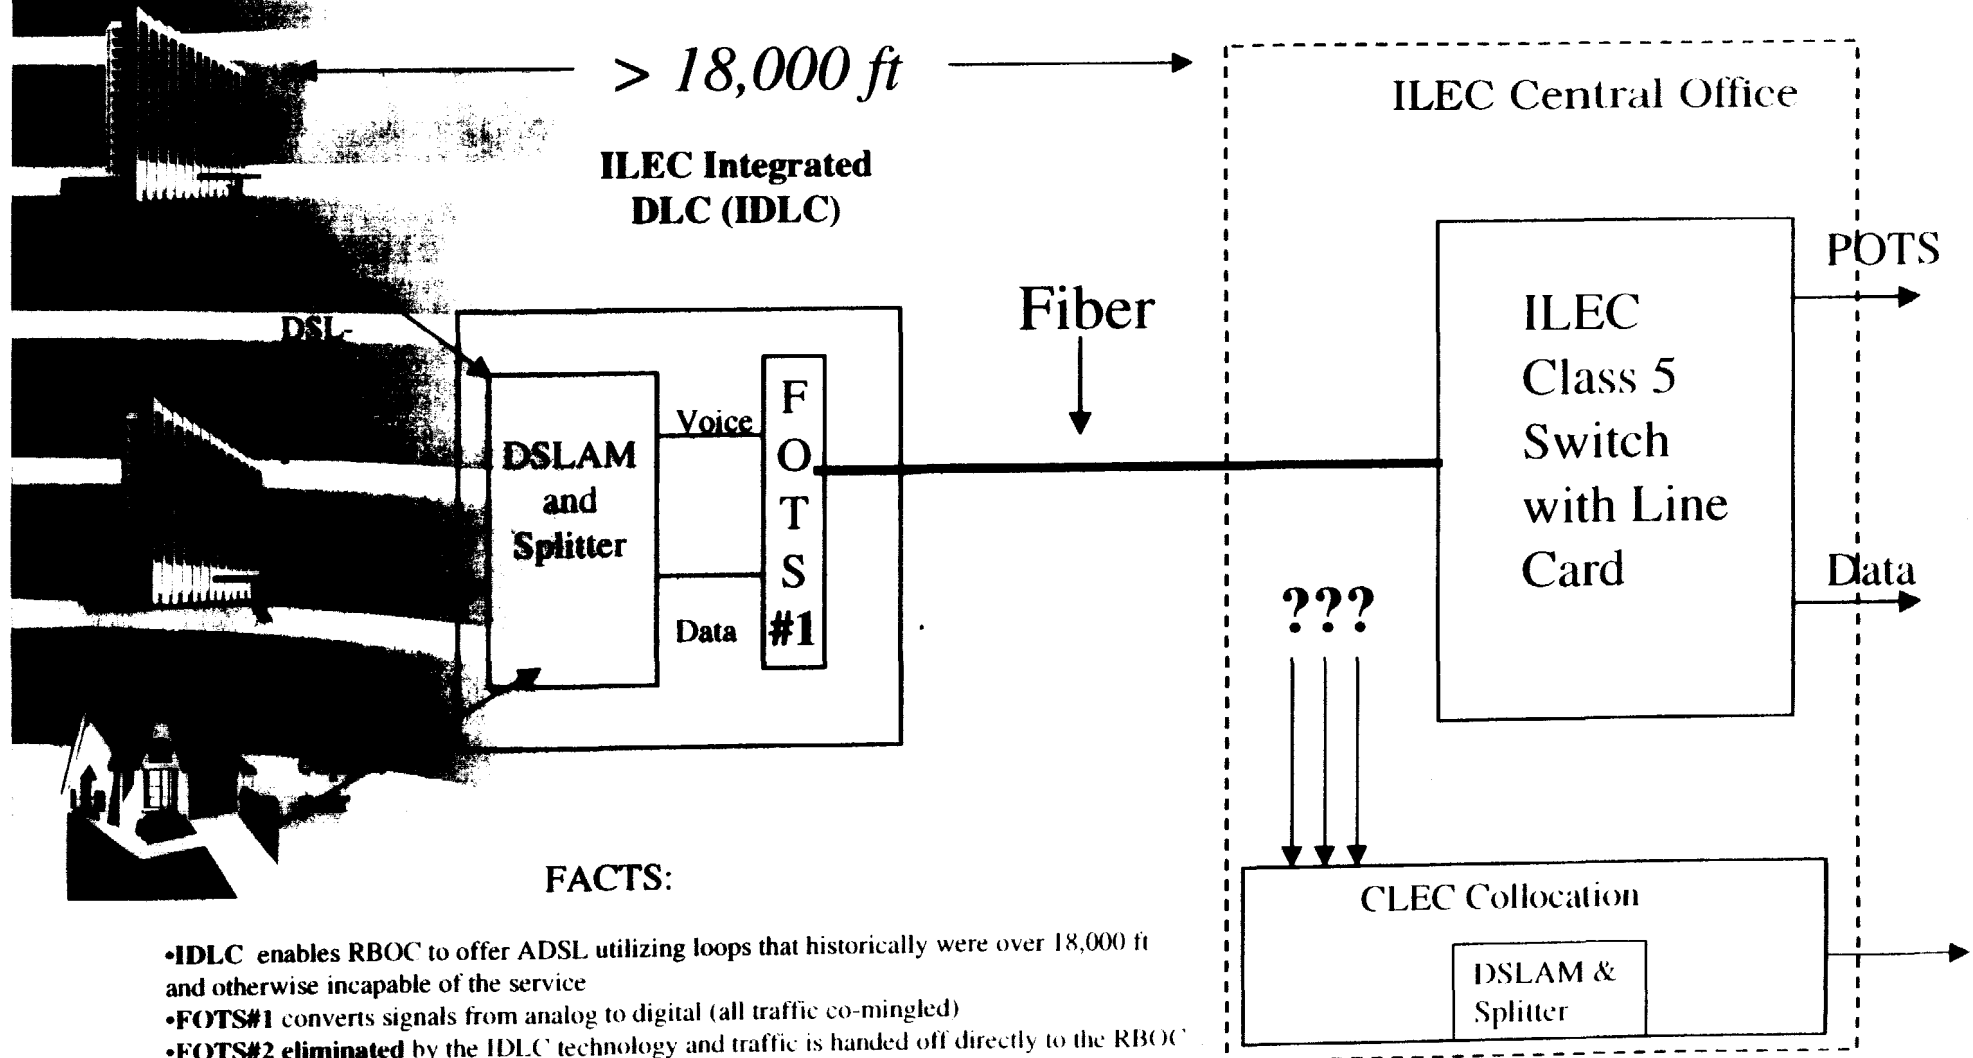

ILEC Universal DLC (UDLC)

- UDLC** enables RBOC to offer ADSL utilizing loops that historically were over 18,000 ft and otherwise incapable of the broadband service
- FOTS#1** converts signals from analog to digital (all traffic co-mingled)
- FOTS#2** converts signals from digital back to analog (24 VG individual customer circuits)
- In many instances**, the RBOC refuses access to UDLC loops and alternatively offers cooper from customer to CO **BUT** the length is over 18,000 ft and therefore technically incapable of the service

Diagram 4

Copper Between Customer Premises and Integrated Digital Loop Carrier Next Generation of Electronics

FACTS:

- IDLC enables RBOC to offer ADSL utilizing loops that historically were over 18,000 ft and otherwise incapable of the service
- FOTS#1 converts signals from analog to digital (all traffic co-mingled)
- FOTS#2 eliminated by the IDLC technology and traffic is handed off directly to the RBOC switches as digital (DS1 level)
- Prevents CLEC from accessing individual VG circuits of individual customers. CLEC would be required at a minimum to take full DS1 channel
- In many instances, the RBOC refuses access to IDLC loops and alternatively offers copper from customer to CO BUT the length is over 18,000 ft and therefore technically incapable of the service

Existing FCC Separate Subsidiary Requirements Are Not Adequate

Existing FCC subsidiary requirements predicated on assurance of competition already established...i.e. Section 251/252 follows meeting the checklist.

Experience with existing data subsidiaries has demonstrated that safeguards are not yet enforceable.

Incumbents cannot be allowed to use their existing network advantages to provide data services or exempt data elements from Section 251/252 requirements of Act.

- Incumbents themselves have stated that separate subsidiaries are not efficient.

Advanced Broadband Infrastructure Deployment In A Competitive Environment

For all data network elements, FCC and States must
enforce Sections 251/252 of the Act.

• Collocation must be made economically and technically

• Unbundled loops must be defined to include necessary
services as network architecture evolves to IDLC
system.

- Data services offered by incumbent must be subject to all the same provisioning, element availability and collocation requirements as those imposed on competitors.
